SUBJECT Issues with SSH Keys in GECGithub

Hello,

I am having issues with my SSH Key in GECGithub. All of a sudden it is not working. I recently got a new laptop and just thought that I would copy them over. However, I moved my SSH key from my old host but now I am not able to commit to any repositories or anything of that nature. Could someone help me?

Thanks,

Ajit Hanif // Systems and Infrastructure Engineer I, Information Security

Ok, so although it should work and I am not necessarily sure why you are having the technical difficulties, one thing you must consider is that it is the best practice to generate the new ssh keys for a new computer, as when you are managing it in gecgithub you will know which ssh key is associated with each machine you may run. Anyway, I generated a new ssh key pair attached and displayed here

here is the private key

-----BEGIN OPENSSH PRIVATE KEY-----

-----END OPENSSH PRIVATE KEY-----

here is the public key

save the private key as id_ed25519 and the public key as id_ed25519.pub
